

3. Service connection for bilateral flat feet.

The condition identified as bilateral flat feet is considered a congenital or developmental defect which is unrelated to military service and not subject to service connection. According to the recent VA examination, you were noted to have congenital flat feet which were not aggravated by your military service. It was noted that you currently use shoe inserts to assist with your symptoms. Therefore, because there is no evidence to show that your condition was incurred by your military service or permanently aggravated by your service, service connection cannot be granted.
