There were no records to review.

SECTION I - DIAGNOSIS

NOTE: The diagnosis section should be filled out AFTER the clinician has completed the examination

1A. Does the Veteran currently have an eye condition *(other than congenital or developmental errors of refraction)*?
[X] Yes [] No

(If "Yes," provide only diagnoses that pertain to eye conditions):

Diagnosis #1: Nuclear Cataracts bilateral
ICD code(s): H25.13
Date of diagnosis: 02/02/2019

Diagnosis #2: Macular Drusen, Left Eye
ICD code(s): H35.362
Date of diagnosis: 2012

Diagnosis #3: Choroidal Nevus, Left Eye
ICD code(s): D31.32
Date of diagnosis: 02/01/2019

1B. If there are additional diagnoses that pertain to eye conditions, list using above format:
Dry eye syndrome bilateral; ICD Code: H04.123; Date: 2/1/2019.

SECTION II - MEDICAL HISTORY

2. Describe the history *(including onset and course)* of the Veteran's current eye condition(s) *(brief summary)*:

For the Claimed Compensation Condition of - EYE DISEASE

Date of onset: 2010

Details of onset: The Veteran stated his eyes began to worsen in 2010, right before he exited the military. He was around a lot of jet fuel, working on flights. He feels like he has had blurry vision since then, along with watering and dryness which has worsened. The Veteran also stated he saw previous medical records, and saw he had macular degeneration, but was never told by his previous Optometrist.

Course of the condition since onset (Has the condition progressed? Stayed the same?): Progressed

Current symptoms (or state if the condition has resolved): The Veteran experiences blurry vision, watery eyes, and eye dryness.

Any treatment, medications or surgery? No.

Any previous x-rays/labs/testing (if not available for review, simply state so)? No.

SECTION III - PHYSICAL EXAMINATION

1. VISUAL ACUITY

Visual acuity should be reported according to the lines on the Snellen chart or its equivalent. If assessment of the Veteran's visual acuity falls between two lines on the Snellen chart, round up to the higher (worse) level (poorer vision) for answers a-d below. (For example, 20/60 would be reported as 20/70; 20/80 would be reported as 20/100, etc.)

RE: [redacted]

Dear [redacted]

I examined [redacted] on January 5, 2011. You requested a consultation for possible glaucoma. Examination revealed visual acuity that corrects to 20/25. He had a rather normal anterior segment examination with normal intraocular pressures. Funduscopically, he did have early signs of macular degeneration. Follow-up is scheduled for one year time, sooner should other problems develop. Many thanks for your confidence and kind referral. I look forward to hearing from you soon.

Sincerely Yours,

[redacted]
